

Document Acts and the Ontology of Social Reality

Barry Smith
March 16, 2016

Massively Planned Social Agency

Philosophers of language have concentrated on the speech acts involved in simple conversations among friends sharing common goals

Large-scale social institutions require communication across time and space and between persons who have conflicting goals

Hypothesis: Documents – and thus document acts – are indispensable to the workings of large-scale social institutions

Some examples of documents

Made of paper

Not made of paper

novel

license

clay tablet

gravestone

newspaper

dollar bill

car license

film credits

recipe

diploma

plate

street name

map

contract

policeman's

clock

journal article

will

badge

bus ticket

blueprint

traffic sign

sundial

Some major types

- Literary document
- Journalistic document
- Scientific document
- Legal document
- Financial document
- Identity Document

What you can do with any (paper) document

- Burn it
- Lose it
- Throw it away
- Give it away
- Shelve it
- Steal it

You can't steal a speech act

What can you do with a literary document

(Write it)

Read it

Criticize it

Cite it

Recommend it

Index it

Publish it

Reprint it

Anthologize it

Recite it

what you can do with a document

VS.

what a document can do

- cite another document
- provide evidence
- document a command
- document a right (driver's license)
- document an obligation (IOU)
- serve as a medium of exchange

Document acts for a scientific document

- Test it
- Implement it
- Use as source of evidence
- Use as source of hypotheses ...
- Revise it
- Edit it
- Review it prior to publication
- Accept it for publication
- Reject it for publication

Some examples

Made of paper

novel
textbook
newspaper
advertising flier
recipe
map
business card
clock dial
compas dial
scientific journal
article

license
dollar bill
degree certificate
deed
contract
will
receipt
statement of
accounts
medical consent
form

Not made of paper

clay tablet recording
outcome of litigation
e-document
electronic health record
movie clapper
stock market ticker
car license plate
policeman's badge

advertising
hoarding
gravestone
hallmarked
silver plate
film credits
exterior signage
on buildings
sundial

We will focus here on the class of legal and financial (roughly: time-sensitive) documents

of importance e.g.

- in security (identification documents)
- in commerce
- in law

OED defines ‘document’

1., 2. Teaching, lesson learned (cf. *doctor*, *docile*, *docent*)

3. That which serves to show, point out, or prove something; evidence, proof.

4. Something written, inscribed, etc., which furnishes evidence or information upon any subject, as a manuscript, title-deed, tomb-stone, coin, picture, etc.

Some *processes* in the social realm

- In 2007, a bank in Florida lends you \$1 million
 - You buy a beach condo for \$1 million
 - The title to the condo is deposited with the bank as security on your loan
-
- In 2008, the value of your condo collapses
 - You owe the bank \$1 million but your house is worth only \$500,000
 - You walk away from the loan and give the keys back to the bank

Some *objects* in the social realm

- The bank
- The condo
- The price you paid in 2007
- The price you could get in 2008
- Your mortgage
- Your mortgage contract
- Your signature on the mortgage contract
- Your breaching of the mortgage contract
- The value of the mortgage in 2007

Some ontological questions

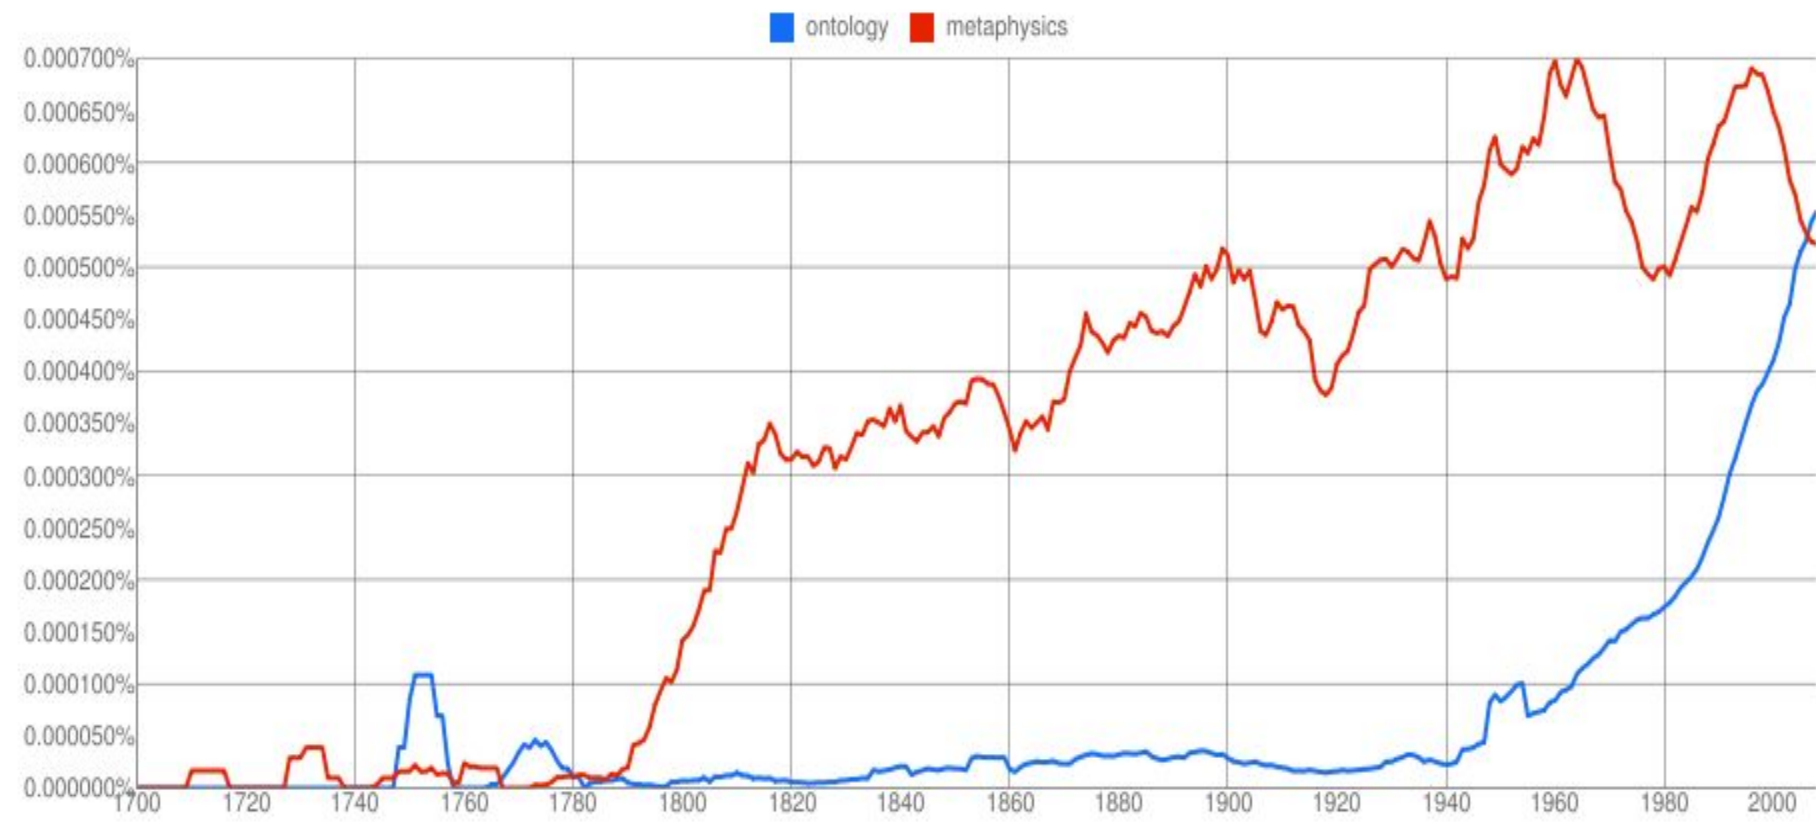

- What is a debt?
- What is a mortgage?
- What is a mortgage contract?
- What is a signature?
- What is a credit card?
- What is a credit card number?

Why do Plato and Kant have no answers to such questions?

Graph these **case-sensitive** comma-separated phrases:

between and from the corpus with smoothing of .

[Search lots of books](#)

Search in Google Books:

1700 - 1847	1848 - 1996	1997 - 2000	2001 - 2004	2005 - 2008	ontology

Systems of mutually correlated claims and obligations

are essential to the workings of societies
both large and small

compare how traffic laws are essential to
the workings of roads

John Searle

The Searle Thesis

Through the performance of speech acts (acts of promising, marrying, accusing, baptising) we *change the world*

- by bringing into being claims, obligations, rights, relations of authority, debts, permissions, names, ...

How do the obligations created by speech acts

- hold (large and small) societies together over the long term?

In the local case, when you make a
promise

your obligation is tied to psychological
factors: memories, expectations, your
desire to preserve your good name

But what about the non-local case?

Hernando de Soto

Institute for Liberty and Democracy, Lima, Peru

The de Soto Thesis

Documents and document systems are mechanisms for creating the institutional orders of modern societies

*The Mystery of Capital:
Why Capitalism Triumphs in the West
and Fails Everywhere Else,*
New York: Basic Books, 2000

With the invention of *documented* claims and obligations

- a new dimension of socio-economic reality comes into existence:
bank accounts, stocks, shares, bonds,
mortgages, credit cards

These form enduring social networks – document systems – of entirely new types

Hernando de Soto

- first recognized the pivotal role of documents in the ontology of socio-economic reality
- documents enable
 - new types of distributed ownership through stocks, shares, pensions
 - new types of legal accountability
 - new types of business organization

What document act theory is about

- the social and institutional (deontic, quasi-legal) *powers* of documents
- the *social interactions* in which documents play an essential role
 - for example allowing post-mortem instructions
- the *enduring institutional systems* to which documents belong

Basic distinctions

- document as stand-alone entity vs. document with all its different types of proximate and remote attachments
- document template vs. filled-in document
- document vs. the piece of paper upon which it is written/printed
- authentic documents vs. copies, forgeries

What happens when you *sign* your passport?

- you **initiate** the validity of the passport
- you **attest** to the truth of the assertions it contains (autographic)
- you provide a **sample pattern** for comparison (allographic)

Three document acts for the price of one

Passport acts

- I use my passport to prove my identity
- You use my passport to check my identity
- He renews my passport
- They confiscate my passport to initiate my renunciation of my citizenship

The creative power of documents

title deeds *create* property

stock and share certificates *create* capital

examination documents *create* PhDs

marriage licenses *create* bonds of matrimony

bankruptcy certificates *create* bankrupts

statutes of incorporation *create* business
organizations

charters *create* universities, cities, guilds

The creative power of documents

insurance certificates

treaties

patents

licenses

summonses

membership cards

divorce decrees

edicts of parliament

The creative power of documents

document *creates* role

(physician's license creates *physician*)

holder of role *creates* document

(physician creates *sick note*)

documents issued by an authority **within the framework of a legally valid institution**

VS.

documents issued by an authority extralegally **on its own behalf** (US *Declaration of Independence*)

Identity documents

- create identity (and thereby create the possibility of identity theft)
- what is the ontology of identity?
- what is the epistemology of identity (of the technologies of identification)?

Africa

Hernando de Soto

Institute for Liberty and Democracy, Lima, Peru

Bill Clinton:

“The most promising anti-poverty initiative in the world”

All of the document types we now take for granted

- and all of the processes and institutions in which documents are involved
- had to be invented – for instance *letters of credit* were *invented* in Florence, Venice Genoa in the Middle Ages

de Soto: They are being reinvented in Africa today

In Africa: the realm of extra-legal (spontaneously created) law

- In Tanzania, villages are relatively isolated from the influences of big-city law
- but this does not mean that they are free of legal-commercial activities and of associated institutions
- and of rudimentary documents

extralegal cell phone renting
and supply of pre-paid call time

Massai cell phone User

KUMB. No. KT/PL/WR/.....

KWA; Mwenyekiti wa Bank
M. N. B. Bank
Kibaha - Pwani

YAH: Bw. JAMES M. MARYESSA JEMU

Husika na mtajwa hapo juu.
Ni mkazi wa Kitongoji cha Picha ya ndege - Lulanzi na anaishi katika ubalazi wa Bw/Bi. M. N. B. Bank Nyumba namba KT/PL/.../.../... Ambayo
ni M. N. B. Bank na ameomba mkopo katika Bank yako
ya M. N. B. Bank Kibaha.

Ni mfanyabiashara hapa Picha ya ndege. Biashara yake ni ya M. N. B. Bank
Kwa hiyo ni Matumaini yangu kuwa ombi lake litakubaliwa katika ofisi yako.

Wako katika ujenzi wa Taifa.

G.A. MWAIPOPO
M/KITI WA KITONGOJI
P/NDEGE - LULANZI
KIBAHA - PWANI

Document in which a *Mwenyekiti* from the Kibaha area certifies the identity of an individual from his village. Both photograph and signature are authenticated with an official stamp.

identification

Marks used to identify ownership of the cattle at an auction market in Dodoma.

The cattle identification by branding serves as the basis for a formal pledge system.

adjudication

Elders engaged in dispute resolution in Kisongo (Tanzania) dealing with conflicts about family matters, parcel boundaries and other property issues. Evidence is brought from witnesses and community members.

NB: Barua ya Maelizo imeambatanishwa

Documentation of the resolution of a dispute over land in the Arusha area and of the property rights thereby established. A council of notable elders is selected as judges and they follow established rules for the hearing, for presenting and processing evidence before the community.

property right

- The difference between a piece of land and property is that property can be set out in a written document with determinate meaning. **This document creates and establishes the right, which ties owner to physical asset in an enduring way.**
- The system of such documents creates a new abstract order

registration

The Mwenyekiti keeps records of births deaths, contracts ..., provides written and unwritten proof of customary rights of occupancy, participates in real estate transactions as witness

registration

- registration makes documents permanently accessible, providing in one single source records of the information required to know **who owns what**
- without this information, the combination and mobilization of assets is risky, and it is impossible to apply legal provisions against fraud and theft.

registration

registration

- Paper documents serve as **filaments that bind** different elements of social and institutional reality in a way which leads to the creation of new types of value.
- A **network of social relations** is created by the network of cross-referenced and **cross-attached documents**. In this way, the registry of documents forms a mirror of the network of legal and property relationships.

Anchoring

- a photograph alone is not sufficient to establish your identity: it must appear in the right place in the right sort of document that has been marked in the right sort of way by signatures, counter-signatures, stamps, ID numbers

Blockchain

- a distributed database based on the bitcoin protocol that maintains a continuously growing list of data records hardened against tampering and revision, even by its operators.
- blocks record and confirm when and in what sequence transactions enter and are logged in the block chain; blocks are created by users known as ‘miners’ who use specialized software to create blocks.

Blockchain decentralization

- Every node in a decentralized cryptocurrency system has at least a partial copy of the entire block chain. This avoids the need to have a centralized database.
- Cryptocurrencies use various timestamping schemes to avoid the need for a trusted third party to timestamp transactions.

allow *cross-referencing* to documents

The Mystery of Capital

when you have legal title to your house you can

- use your house as an address for receiving public utility services such as mail and electricity
- buy insurance on your house
- use your house as collateral on a loan – your house allows you to live in it and at the same time use its value to build a factory

But what happens when it all
breaks down?

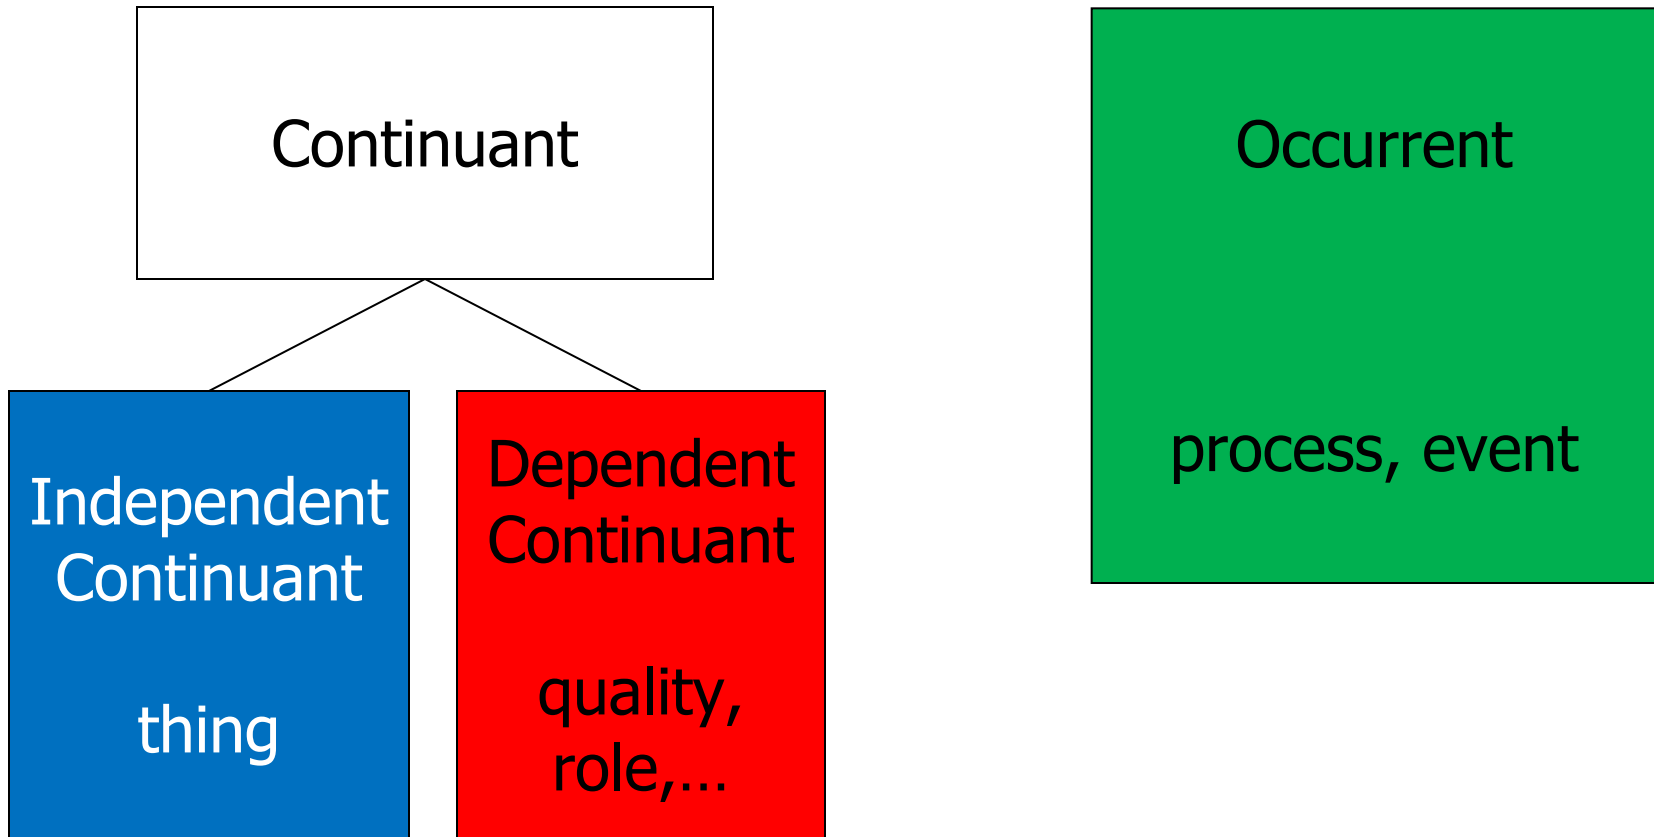

The story of what happens

- In 2007, a bank in Florida lends you \$1 million
 - You buy a beach condo for \$1 million
 - The title to the condo is deposited with the bank as security on your loan
-
- In 2008, the value of your condo collapses
 - You owe the bank \$1 million but your house is worth only \$500,000
 - You walk away from the loan and give the keys back to the bank

What sorts of entities are involved in this story?

- The bank (?)
- The condo, the keys
- The price you paid in 2007
- The price you could get in 2008
- Your mortgage contract (?)
- Your signature on the mortgage contract (?)
- Your mortgage (pre-default)
- Your commitment to repay the mortgage
- The same mortgage (post-default)

Basic Formal Ontology

*The **occurrent** story*

- In 2007, a bank in Florida **lends** you \$1 million
- You **buy** a **beach condo** for \$1 million
- In 2008, the **value** of **your condo collapses**: you owe the bank \$1 million but **your condo** is **worth** only \$500,000
- You **walk away** from the **loan** and **give** the **keys** back to the bank

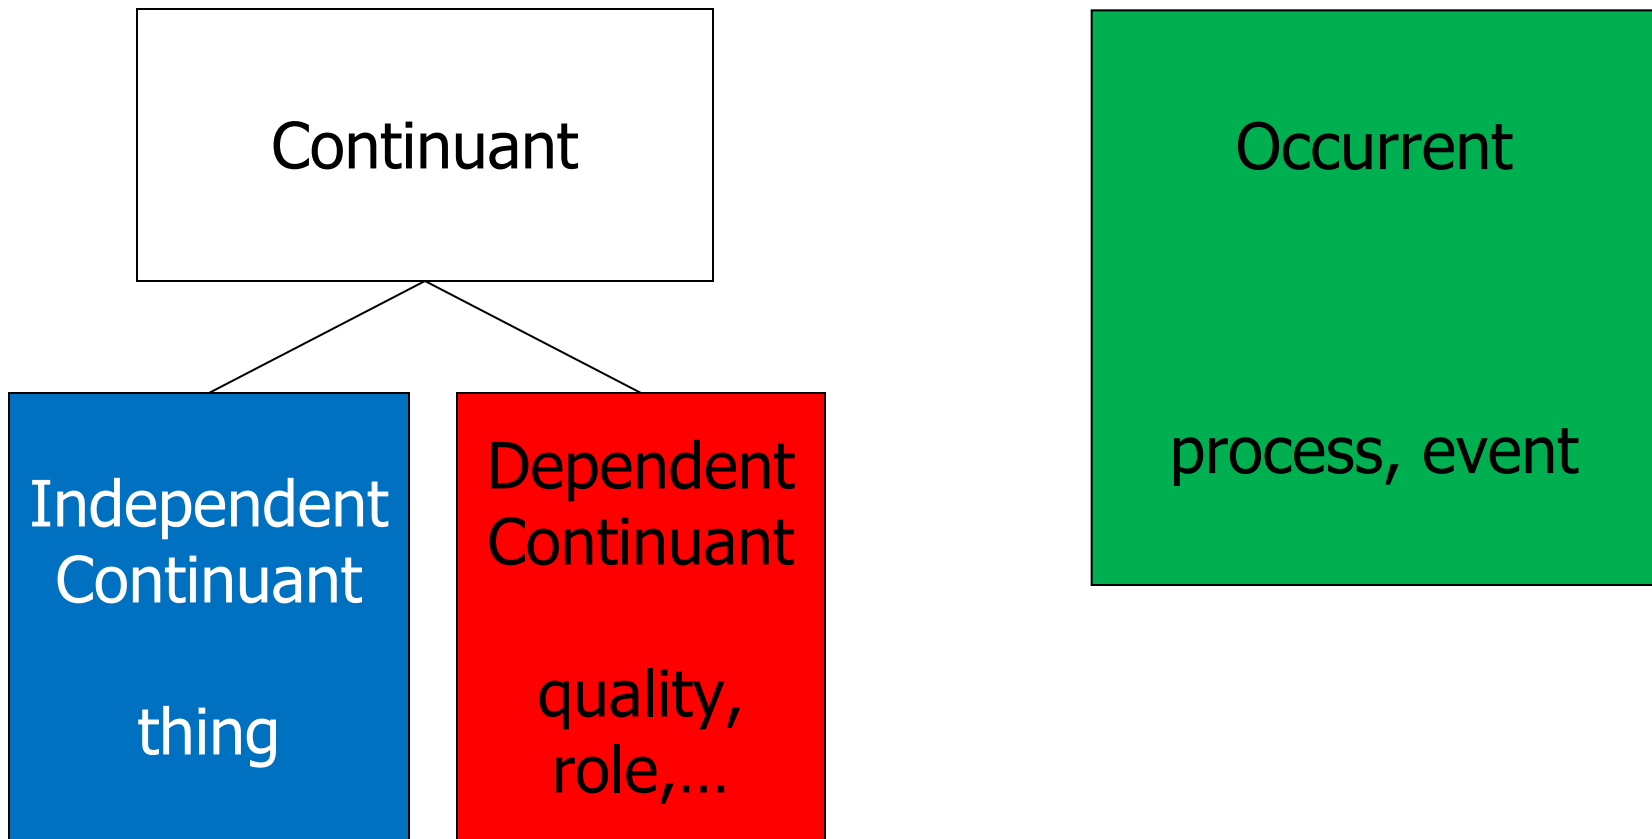

*the **dependent** and **independent**
continuants involved in this story*

- The **bank**
- The **condo**, the **keys**
- **The price** you paid in 2007
- **The price** you could get in 2008
- **Your mortgage contract**
- Your **signature** on the mortgage contract
- **Your mortgage** (pre-default)
- **Your commitment** to repay **the mortgage**
- **The same mortgage** (post-default)

The aftermath

- Your **mortgage** was **bundled** with 100s of other **mortgages** to form a **collateralized debt obligation (CDO)**
- which was **sold** to **investors**
- Some **CDOs** were **bundled** to form **CDO²s, CDO³s, ... CDOⁿs.**
- In 2008 this whole family of **investment vehicles** **collapsed** in **value**

Basic Formal Ontology

Continuant

Independent
Continuant

Continuant

Quality

Role

Occurrent

Realization

An ontological problem: what is a bank loan?

On the one hand it is something like a *mathematical structure*.

Yet its existence is *tied to time and change*.

Plato would have regarded such a combination of properties as something impossible.

(Cf. Mackie's argument from metaphysical queerness)

The ontology of the bank loan

- CDOs seem to fall outside the standard philosophical dichotomies of
 - physical vs. mental
 - concrete vs. abstract
 - *ens rationis* vs. *ens realis*
- They are in some sense *normative entities* ('obligations'), that can be bought and sold, aggregated and stored, spliced and diced, engineered and re-engineered

The ontology of toxic assets

- In 2007, I bundle your mortgage with 100s of other mortgages and sell the result – a ‘collateralized debt obligation’ (CDO) – to investors.
- This first CDO is supported directly by mortgages
- It is bundled with 100s of other CDOs to create a CDO², backed not by mortgages, but by other CDOs
- ... and so on, with CDO³, ... CDOⁿ, *ad indefinitum*

More ontological questions

- What is a CDO?
- A pattern of blips on computers?
 - Can you buy and sell a *pattern of blips*?
- Is it made of molecules? Can it stand in physical relations of cause and effect?

No; It is more like a *mathematical structure*.

Yet its existence is *tied to time and change*.

Already Plato would have regarded such a combination of properties as something impossible.

The ontology of the CDO

- CDOs seem to fall outside the standard philosophical dichotomies of
 - physical vs. mental
 - concrete vs. abstract
 - *entia rationis* vs. *entia realis*.
- They are in some sense *normative entities* ('obligations'), that can be bought and sold, aggregated and stored, spliced and diced, engineered and re-engineered

OPINION | MARCH 25, 2009

Toxic Assets Were Hidden Assets

We can't afford to allow shadow economies to grow this big.

Article

Comments

Generically
Dependent
Continuant

Quality

Role

What is a credit card number?

- not a physical object taking part in causal relations
- but a historical object, with a very special provenance, standing in relations analogous to those of ownership, existing only within a nexus of working financial institutions of specific kinds
- something like an abstract key fitting into a global system of (institutional) locks

Is document act theory really something
new?

Austin, Searle *et al.* all mention that
speech acts can be performed with
documents (in French speech acts are
called ‘*actes du langage*’)

But nowhere do we find discussions of how documents – statutes, charters, bills, titles, testaments, treaties – are issued, signed, counterstamped, stamped, sealed, ratified, registered, annulled, executed, challenged, revised, reviewed, ...

and of how all of these kinds of acts are indispensable to hold complex societies in being

Information vs. Information Artifact

‘information’ – mass noun (Shannon and Weaver)

‘information artifact’ – count noun

Software and Other Cultural Artifacts

Barry Smith

Why the ontology of software is important

An example:

Digital Rights Management

Is Word 3.1 the same piece of software as Word 3 ?

Digital Object Identifiers (DOI)

creator =def. A party contributing to the making of an original creation, in whole or in part

creation =def The output of creative activity

input =def A pre-existing entity which participates in a relation in a passive, qualifying or supportive role

original creation =def A creation without a source input

Indecs

The Mona Lisa is not an original creation – it used a certain lady as input

No painting is an original creation, since every painting involves the use of a paintbrush as input

Can we do better?

Searle's ontology of the social world

X counts as Y in context C

this man *counts as* a president

this building *counts as* a cathedral

this lump of stone *counts as* a statue

this piece of paper *counts as* a set of instructions
to be executed after my death

Searle, *The Construction of Social Reality*, 1987

The *counts as* formula applies to
occurrents also

this audio-acoustic blast *counts as* a promise

this smashing of a bottle of champagne
counts as a naming of a ship

this lifting of the hand *counts as* making a bid

X counts as Y in context C

X and Y are one and the same part of physical reality

which fall under different descriptions

X counts as Y in context C

What about the money in your (electronic)
bank account?

your money

blips in the
computer

Turtles

It could not be that the world consists of institutional facts all the way down, with no brute reality to serve as their foundation.

Turtles

Searle: wherever a status-function is imposed there has to be something it is imposed upon

Eventually the hierarchy must bottom out in brute facts = phenomena whose existence is not a matter of human agreement.

The Construction of Social Reality:

all sorts of things can be money, but there has to be some physical realization, some brute fact

– even if it is only a bit of paper or a blip on a computer disk –

on which we can impose our institutional form of status function.

But

Does a blip on a computer disk really *count as money*?

Do we truly *impose status functions* on blips in computers?

Can we use blips in computers *to buy things with*?

representation

the money in your bank account
is *represented by* blips in the
bank's computer

Searle:

“On at least one point ... the account I gave in [*The Construction of Social Reality*] is mistaken.

“I say that one form that money takes is magnetic traces on computer disks, and another form is credit cards.”

Computer blips + credit cards

“Strictly speaking neither of these is money, rather, both are different *representations* of money.”

The ontology of chess

A game of chess

physical
movements
of physical
pieces of

wood

A game of blind chess

thoughts

?

thoughts

A Game of Blind Chess

something non-physical

– the thoughts and utterances are not parts of the game (they are representations)

– what then is the game?

- some ideal Platonic pattern?
- nothing at all? (fictionalism)

A Game of Blind Chess

is something *non-physical*

something like: an abstract pattern, that is at the same time tied to specific players and to a specific occasion

and to the specific history of the planet

A Debt

(records
)

an abstract pattern
tied to specific
parties and to a
specific initiating
event

thoughts

thoughts,
worries

A Debt

(records
)

an abstract pattern
tied to specific
parties and to a
specific initiating
event

nothing
here

thoughts

thoughts,
worries

Two sorts of social reality

presidents, driving licenses, cathedrals,
spoken promises, bids at auctions, ...

debts, blind chess games, money in your
bank account, ...

= free-standing Y terms – no underlying
physical X with which Y is identical

Free-Standing Y Terms

are entities of a third kind:

there are neither real, physical entities
nor abstract, Platonic entities existing
outside time and space

but abstract entities tied to history and to
specific contexts of human behavior

Free Standing Y Money

does not tarnish

does not burn

is not subject to physical processes

its existence in time rather has the form:

Three aspects of Platonism

1. abstract
2. uncreated
3. repeatable

debts, wills not repeatable

software, chess game repeatable

historico-cultural entities, often with quasi-mathematical properties

- we pool and collateralize assets
- we securitize loans
- we consolidate debt
- Social Security Numbers cannot tarnish and cannot burn

Homework: the ontology of [culturally
created] numbers

Mathematical expressions are free-standing Y-terms

- mathematical theorems cannot tarnish and cannot burn

Roman Ingarden

The Literary Work of Art: Investigations on the Borderlines of Ontology, Logic and the Theory of Literature (1931)

marks of the literary work

it is created (thus not an abstract Platonic entity)

it can have copies

but it is not identical with any copy (a copy counts as a copy)

it is an ordered written sequence (a created pattern)

it can be read

the readings unfold in real time

the events represented unfold in represented time

some readings may be better (more faithful) than others

there may be a history of readings → the work itself has a life
in real time (it is born, ignored, rediscovered ...)

marks of the work of drama

it may be physically performed

it may be mentally performed (I imagine a performance)

some performances may be better (more faithful) than others

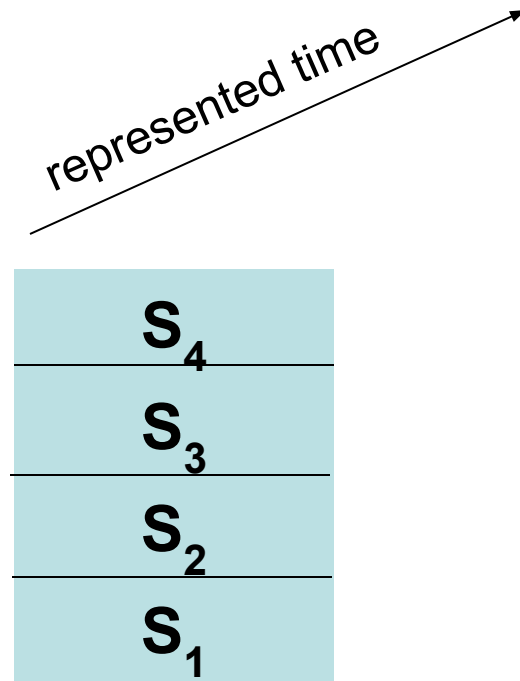

the dramatic work is not identical with any performance

the dramatic work is not identical with any copy of the script

the literary work is a stratified pattern

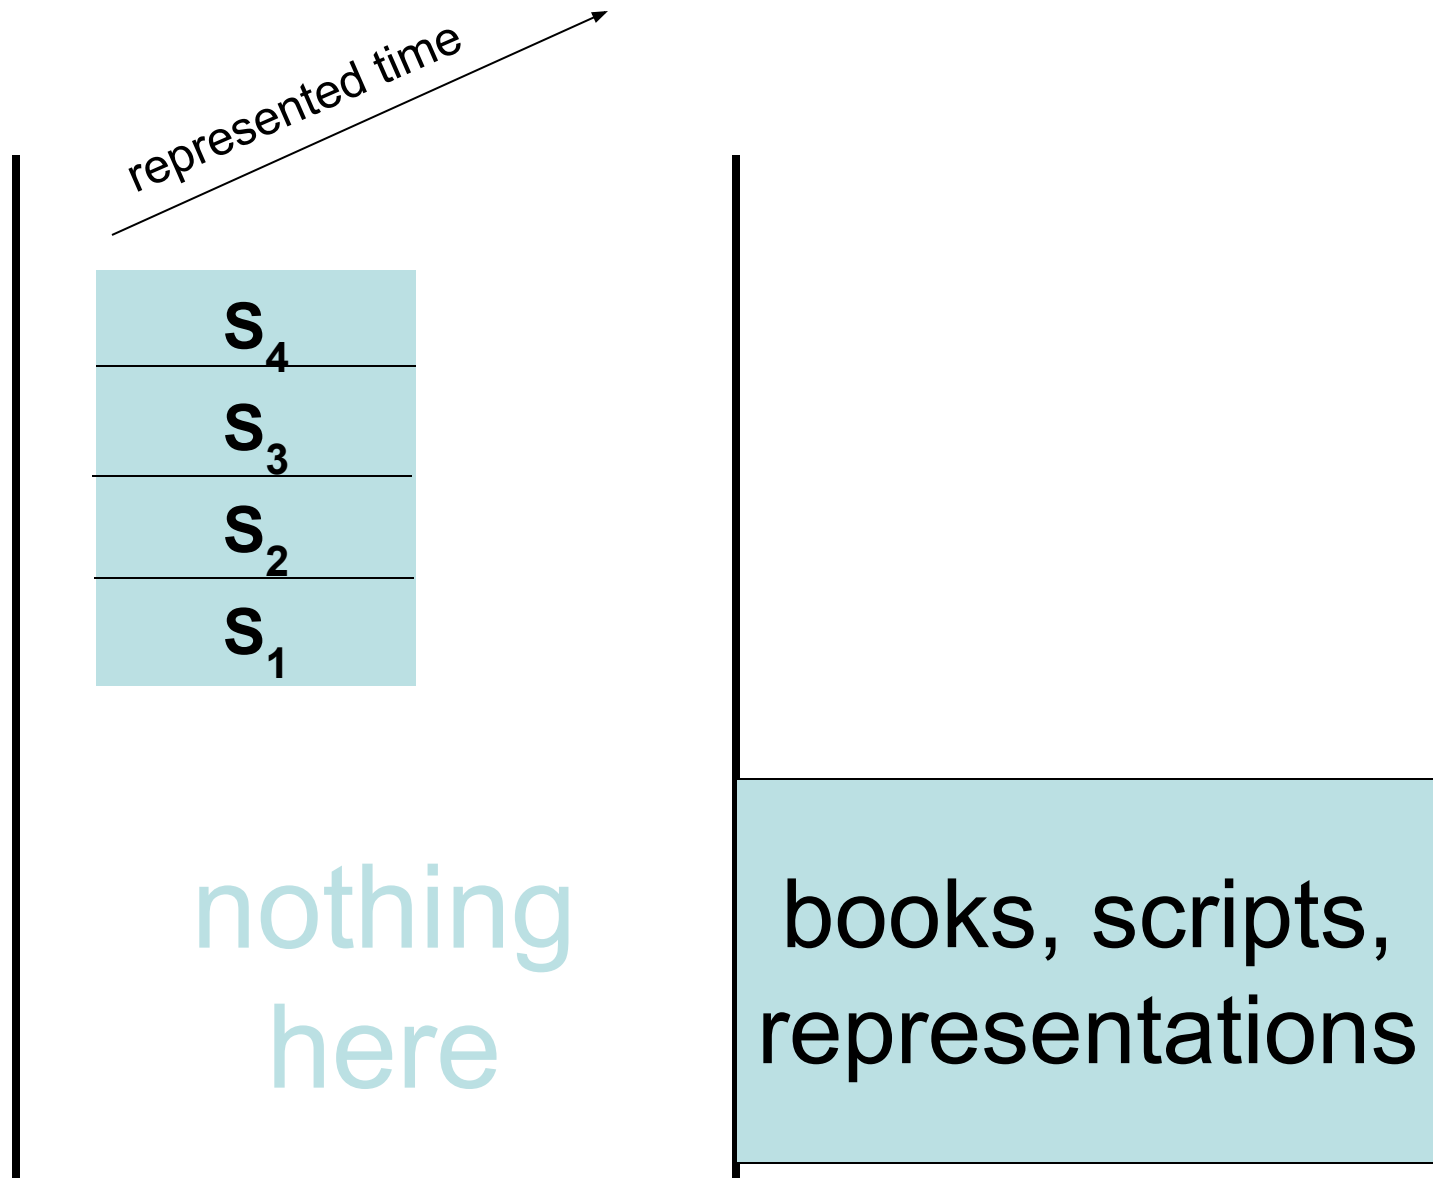

1. word sounds and phonetic formations of higher order
2. meaning units and higher-order meaning formations
3. schematized aspects (visual, auditory, or other aspects through which the entities represented in the work may be quasi-sensorially apprehended)
4. field of represented entities (the objects, events, states of affairs, etc., contributing to the plot)

with a quasi-temporal dimension

the dimension of represented time is related to but need not be isomorphic to the order of the words and sentences

free standing Y-pattern

each *reading* yields a stratified pattern

1. word sounds and phonetic formations of higher order (in your inner larynx)
2. meaning units and higher-order meaning formations
3. schematized aspects (in the flow of your imagination)
4. represented entities

literary work and concretizations

represented time

double temporal structure

the life of the literary work

Can we fit software into this
account of cultural objects?

Software = that which humans write

definitions of 'software'

Programs, procedures, rules, and any associated documentation pertaining to the operation of a system. Contrast with hardware.

More narrowly: A program or set of instructions that controls the operation of a computer.

An ordered sequence of written out instructions that controls the operation of a computer for a specific purpose.

marks of the work of software

it is created (thus not an abstract Platonic entity)

it can have copies

but it is not identical with any copy (a copy counts as a copy)

it is an ordered written sequence (a created pattern)

it can be read

the readings (software inspection) unfold in real time

the events represented (instructed) unfold in represented (idealized execution) time

further marks of the work of software

it may be physically performed (on a machine)

it may be mentally performed (I imagine its execution)

the program work is not identical with any execution

the program is not identical with any copy of the code

concretization

- *Programs must be written for people to read and only incidentally for machines to execute. (Abelson & Sussman 1989)*
- Software execution vs. musical performance (role of score)
- Software execution vs. theatrical performance (role of instructions)

executable entity

execution

work of literature	reading
work of music	performance
work of drama	performance
recipe	act of cooking
choreographic script	dance
film script	film screening
service book	religious rite
route plan	funeral procession
piece of software	execution

Conclusion

a piece of software is an entity of the same ontological category as a work of dramatic art

it is an abstract pattern of instructions that is at the same time a historical created entity with concretizations (readings), and executions, and an underlying script or score

Does this neglect the mathematical features of software?

a piece of software ought to run on a computer

has mathematical properties

which need to be dealt with

perhaps God could apprehend the language-free essence of the piece of software from this strictly mathematical point of view

Science of Emerging Media

Barry Smith

Preamble on ontology

Wherever large bodies of data are gathered together, an ontology will arise

to enable people and computers to make sense of them

– for analysis, comparison, search

Google hits Jan. 2004

ontology + Heidegger	58K
ontology + Aristotle	77K
ontology + philosophy	327K
ontology + software	468K
ontology + database	594K
ontology + information systems	702K

BBC World Cup 2010 dynamic semantic publishing

Post categories: [BBC Sport](#)

[Comments](#)

The foundation of these dynamic aggregations is a rich ontological domain model. The ontology describes entity existence, groups and relationships between the things/concepts that describe the World Cup. For example, "Frank Lampard" is part of the "England Squad" and the "England Squad" competes in "Group C" of the "FIFA World Cup 2010".

The ontology also describes journalist-authored assets (stories, blogs, profiles, images, video and statistics) and enables them to be

End of Preamble

**Social reality is being changed by
massive digital networking**

Speech Act Theory

Thomas Reid (1785)

Speech Act Theory

Thomas Reid:

the principles of the art of language are to be found in a just analysis of the various species of sentences. Aristotle and the logicians have analysed one species – to wit, the proposition.

To enumerate and analyse the other species must, I think, be the foundation of a just theory of language.

Reid's theory of 'social operations'

'social acts' vs. 'solitary acts'

**A social act ... must be directed to some other person –
it constitutes a miniature 'civil society'**

Adolf Reinach

Adolf Reinach's theory of social acts (1913)

part of a wider ontology of legal phenomena such as contract and legislation

a 'contribution to the general ontology of social interaction'

Austin

Austin (1955)

‘promising is not something superior, in the same scale as hoping and intending’

Rather, when I say ‘I promise’

I have not merely announced my intention, but, by using this formula (performing this ritual), I have bound myself to others, and staked my reputation, in a new way.

Austin: the speech act of guaranteeing

someone who guarantees and turns out to be wrong is “liable to be rounded on by others” liable to be rounded on by others”

“A Plea for Excuses”

Austin recommends three ‘source-books’ for the study of (speech) actions: the *dictionary*, the *law*, and *psychology*.

Three ingredients: language use, law, psychology

Searle

Searle's *Speech Acts* (1969)

Regulative Rules

merely regulate antecedently existing forms of behaviour, as rules of polite table behaviour regulate eating

Constitutive Rules

create new forms of behaviour, as the rules of chess *create the very possibility of our* engaging in the type of activity we call playing chess

speech acts

an institutional fact = a fact whose existence presupposes the existence of certain systems of constitutive rules called 'institutions'

Searle:

Speech acts are acts performed by uttering expressions in accordance with certain constitutive rules

When you perform a speech act then you create certain institutional facts

(what Reid referred to as a miniature 'civil society').

Institutional facts

exist because we are able to treat the world and each other in certain, very special (cognitive) ways

Examples of institutions:

money

property

marriage

government

Institutional facts exist because of language use, law and psychology

Searle: there is a level of brute facts

**– constituted by the facts of natural science
and independent of all human institutions,**

**From out of this there arises a hierarchy of
institutional facts at successively higher levels.
Built up through the operations of language use,
law and psychology**

**But there is something
missing here**

What happens when you use Turbotax to fill in your tax forms?

You start with a webpage with empty cells

**You enter linguistic signs into these empty
cells**

A new webpage appears

You repeat

**What happens in each successive stage is
determined by the program (by a
combination of physics and mathematics)**

**People are changed in virtue
of the fact that the world they
live in is digitally intermeshed**

***Can we draw a line, here, between
brute facts and institutional facts?***

Consider: Reputation

SAN FRANCISCO

AVAILABLE CHOICES

A taxi-summoning app

Uber allows customers to rate *drivers*

for punctuality, cleanliness, and so forth.

**You can then use these ratings in
making bookings in the future.**

**But then, when they leave the taxi, *the
drivers rate the customers*, and these
ratings too are stored in the system and
used by *drivers* in the future**

**Behind the scenes, good
behavior is being rewarded and
bad behavior punished**

**customers who vomit in the cab, or who
refuse to pay, or who behave
aggressively will find themselves
restricted in their use of Uber in the
future**

First hypothesis

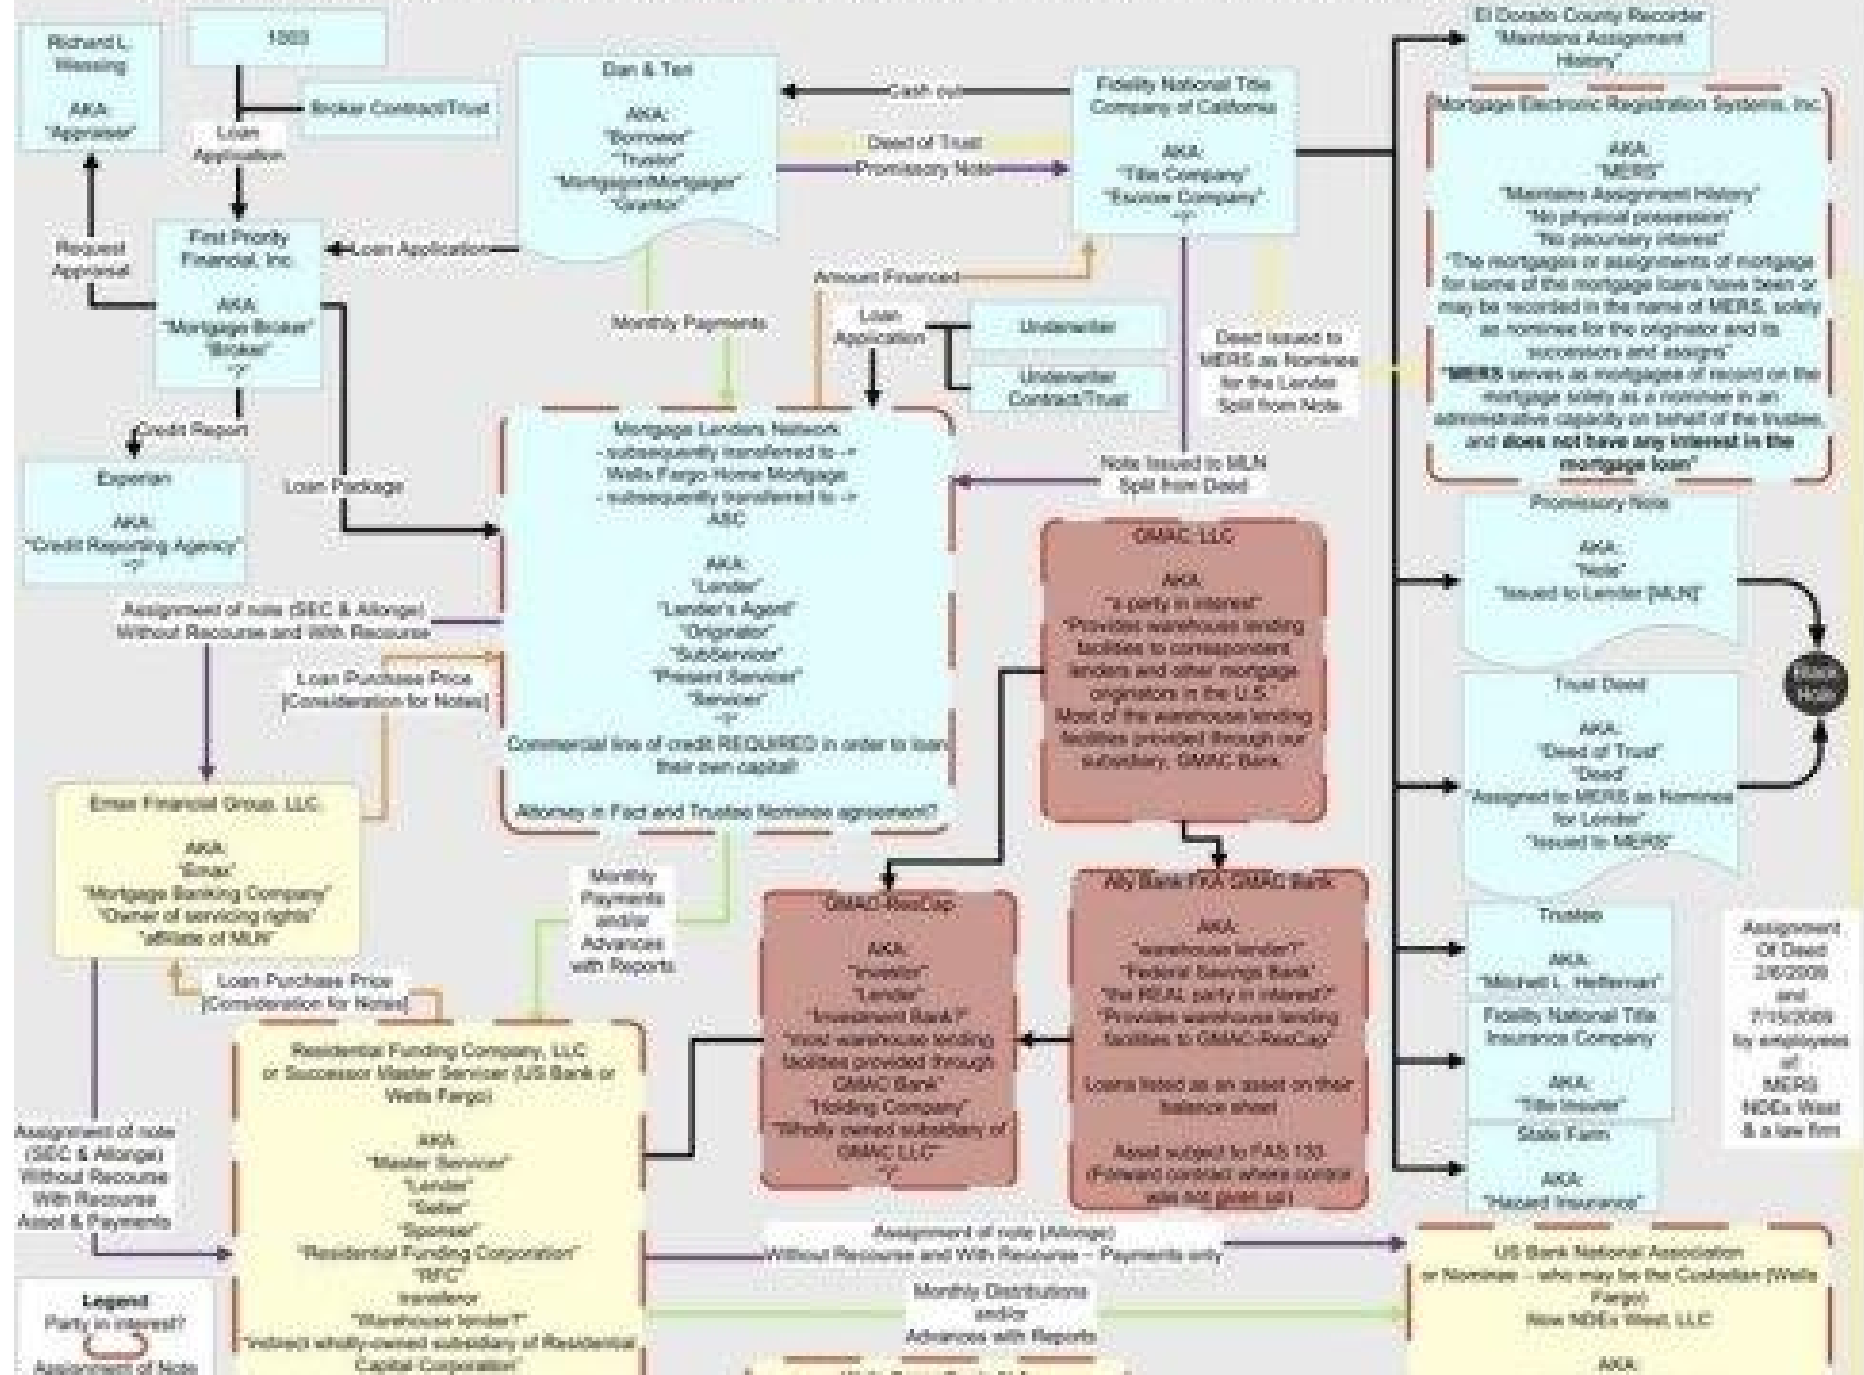

In the era of emerging media all of the following are being radically transformed:

- Reputation**
- Guarantees**
- Institutions and institutional fact**
- Social interactions**
- Commercial interactions**

What happens when 100s of mortgages are bundled together to form a 'collateralized debt obligation' (CDO)?

A CD is created through a series of steps, involving both computers and human beings (and lawyers)

Dan & Teri Securities Transaction Process Reverse Engineered version 4.1

What is a CDO

A CDO is an entity that is in some way associated with the psychology of people, with lawyers, and with the operations of physical devices.

If they are associated with a miniature civil society in Thomas Reid's sense, then it is a miniature civil society that involves multiple computer networks.

What are you buying when you buy a CDO?

Not, it would seem, anything physical. A CDO does not have physical properties.

It is more like a mathematical structure, which can be aggregated and partitioned, packaged and re-packaged, ramped-up and amortized.

It is thereby tied to time and change.

Second hypothesis

In the era of emerging media the idea that there are just two levels:

brute facts of physics

institutional facts resting on

language use + law + psychology

breaks down

in both their structures and in their dynamical unfolding institutional facts are digitally shaped

How family life changes

How commerce changes

How philosophy changes – first, practically all literature is available on demand

How science changes

23andme.com

Wojcicki's goal is to sign up a million customers to send in their DNA. "Big data is going to make us all healthier. What kind of diet should certain people be on? Are there things people are doing that make them really high-risk for cancer? There's a whole group of people who are 100-plus and have no disease. Why?" As of September 2013, 23andMe had 400,000 genotyped customers.

23andMe isn't just about you. Our research arm, 23andWe, gives customers the opportunity to leverage their data by contributing it to studies of genetics. With enough data, we believe 23andWe can produce revolutionary findings that will benefit us all. 181

How warfare changes

The reality is that soldiers are now a form of information technology, responsible for a far broader range of roles, decisions, and systems-based interactions than in any previous conflict. ... Today soldiers' skills are measured largely in relation to the technological systems the soldiers will be using. (Corey Mead, *War Play: Video Games and the Future of Armed Conflict*, 2013)

People change

- *Old theory of personal identity:*

You are a biological organism, with plans, skills, and a reputational trail

- *New theory of personal identity:*

your plans, skills, and reputational trail becoming intermeshed digitally with the plans, skills and reputational trails of other human beings

– making possible new kinds of plans, new kinds of achievements, new kinds of societies

The science of emerging media

The science of how people and societies are changing as a result of digital intermeshing

The science of how people are using digital intermeshing as a way of changing people and societies

People are changed in virtue of the fact that the world they live in is digitally intermeshed

People are changed by the fact that the computer can train them to improve their performance through tiny adjustments of the same act repeated 100s of times

Societies (for example an Army platoon) are created by the fact that the computer can train them to improve their performance through tiny adjustments of the same interaction repeated 100s of times

What are the fetures of emerging media

W. Russell Neuman (1991)

- a) alter the influence of distance,**
- b) increase the volume and speed of communications,**
- c) enable interactive communications**
- d) permit the merging of media forms.**

Now we need to add:

- e) create new kinds of digital entities – as for instance in the realm of financial derivatives**
- f) create new forms of human interaction**
- g) forces technology of overviews**
- h) brings everything into the open (and thereby enables plagiarism, rediscovery-of-the-wheel*, and fraud detection in ways that are already changing science)**

Tenant

1 **Tenant Referencing For
Landlords**

A taxi-summoning app

Uber allows customers to rate drivers

- for punctuality, cleanliness, and so forth. You can then use these ratings in making bookings in the future.

But then, when they leave the taxi, the drivers rate the customers, and these ratings too are stored in the system

Behind the scenes, good behavior is
being rewarded and bad behavior
punished

customers who vomit in the cab, or who refuse
to pay, or who behave aggressively will find
themselves restricted in their use of Uber in the
future

e-people

A new theory of personal identity:

You are a biological organism (with plans, skills, qualifications, titles, etc.) *together with a reputational trail*

–increasingly, your reputational trail is a matter of your rankings on internet ranking sites

–including more or less secret rankings on sites such as Uber, match.com, and SCHUFA

For academics, today, the most important ranking site is google

Welcome to Publish or Perish

Publish or Perish is a software program that retrieves and analyzes academic citations. It uses [Google Scholar](#) to obtain the raw citations, then analyzes these and calculates a series of citation metrics. The results are available on-screen and can also be copied to the Windows clipboard (for pasting into other applications) or saved to a text file (for future reference or further analysis).

- [Getting started](#)
- [Documentation](#)
- [The Publish or Perish Book](#)

The Publish or Perish software and documentation are copyright © 1990 -2011 Tarma Software Research Pty Ltd. All rights reserved.

The Publish or Perish Book is more than just a guide to the software. It is a tremendously accessible introduction to bibliometrics and citation analysis, which many academics and graduate students find a pretty arcane and impenetrable topic.

[Read more Amazon reviews about The Publish or Perish book...](#)

17,536 results

The screenshot shows the PubMed website interface. At the top, the NCBI logo is on the left, and the PubMed logo with the URL 'www.pubmed.gov' is on the right. Below the logos, there are navigation tabs for 'All Databases', 'PubMed', 'Nucleotide', 'Protein', 'Genome', and 'Structure'. The search bar contains the text 'PubMed' in a dropdown menu and 'heart muscle development' in the input field. Below the search bar are buttons for 'Limits', 'Preview/Index', 'History', 'Clipboard', and 'Details'. The display settings show 'Summary' selected, 'Show' set to '20', and 'Sort By' and 'Send to' dropdown menus. The results summary indicates 'All: 17536' and 'Review: 2524'. The first four results are listed below, each with a checkbox, a citation link, a document icon, and a brief description.

e-people (biology + *Bildungskapital* + intermeshing)

A new theory of personal identity:

You are a biological organism, with plans, skills, and a reputational trail that is intermeshed digitally with the plans, skills and reputational trails of other human beings

in such a way as to enable new sorts of human achievements in science, culture, commerce, law, war, ...

Hernando de Soto

Institute for Liberty and Democracy, Lima,
Peru

Bill Clinton:

“The most promising anti-poverty initiative in the world”

de Soto's hypothesis

the development of civilization in the course of history goes hand in hand with the accumulation of documentation

(property titles, registration of persons, professional qualifications, keeping of accounts ...)

The need for a trace

Civilization rests on complex social entities –
claims, obligations, rights, powers, roles,
offices

which survive for an extended period of time

What is the physical basis for this extended
existence? Not the memories of those involved
–but *permanent, re-usable, discoverable* records

These systems of records allowed new
institutional

artefacts such as mortgages and insurance to
be created

and allowed human beings to acquire the habits
and skills needed to participate successfully in

BBC World Cup 2010 dynamic semantic publishing

Post categories: [BBC Sport](#)

[Comments](#)

The foundation of these dynamic aggregations is a rich ontological domain model. The ontology describes entity existence, groups and relationships between the things/concepts that describe the World Cup. For example, "Frank Lampard" is part of the "England Squad" and the "England Squad" competes in "Group C" of the "FIFA World Cup 2010".

The ontology also describes journalist-authored assets (stories, blogs, profiles, images, video and statistics) and enables them to be

Mitt Romney at a Glance

Full Name: Willard Mitt Romney

Political Office: Governor of Massachusetts, 2003-2007

Business/Professional Experience: Consultant, Boston Consulting Group, 1975-77, Bain & Co., Boston, 1977-78, vice president, 1978-84, chairman, CEO, 1991-2001; managing partner, CEO Bain Capital, Inc., 1984-2001; president, CEO Salt Lake Organizing Committee (Winter Olympics), Utah, 1999-2002

Date of Birth: March 12, 1947

Place of Birth: Detroit, Mich.

Education: B.A., Brigham Young University, Provo, Utah, 1971; J.D., Harvard Law School, 1975; M.B.A., Harvard Business School, 1975

Spouse: Marieb Ann DeWine, 1968

**Social reality is being changed by
massive digital networking**

Searle's *Speech Acts* (1969)

Regulative Rules

merely regulate antecedently existing forms of behaviour, as rules of polite table behaviour regulate eating

Constitutive Rules

create new forms of behaviour, as the rules of chess *create the very possibility of our* engaging in the type of activity we call playing chess

Searle:

Speech acts are acts performed by uttering expressions in accordance with certain constitutive rules

When you perform a speech act then you create certain institutional facts

Institutional facts

exist because we are able to treat the world and each other in certain, very special (cognitive) ways

Examples of institutions:

money

property

marriage

government

Institutional facts exist because of language use, law and psychology

Searle: there is a level of brute facts

**– constituted by the facts of natural science
and independent of all human institutions,**

**From out of this there arises a hierarchy of
institutional facts at successively higher levels.
Built up through the operations of language use,
law and psychology**

**But there is something
missing here**

**People are changed in virtue
of the fact that the world they
live in is digitally intermeshed**

***Can* we draw a line, here, between brute
facts and institutional facts?**

Consider: Reputation

AVAILABLE CHOICES

Uber allows customers to rate *drivers*

for punctuality, cleanliness, and so forth.

**You can then use these ratings in
making bookings in the future.**

**But then, when they leave the taxi, *the
drivers rate the customers*, and these
ratings too are stored in the system and
used by *drivers* in the future**

**Behind the scenes, good
behavior is being rewarded and
bad behavior punished**

**customers who vomit in the cab, or who
refuse to pay, or who behave
aggressively will find themselves
restricted in their use of Uber in the
future**

First hypothesis

In the era of emerging media all of the following are being radically transformed:

- Reputation**
- Guarantees**
- Institutions and institutional fact**
- Social interactions**
- Commercial interactions**

Second hypothesis

In the era of emerging media the idea that there are just two levels:

brute facts of physics

institutional facts resting on

language use + law + psychology

breaks down

in both their structures and in their dynamical unfolding institutional facts are digitally shaped

How family life changes

How commerce changes

How philosophy changes – first, practically all literature is available on demand

How science changes

23andme.com

Wojcicki's goal is to sign up a million customers to send in their DNA. "Big data is going to make us all healthier. What kind of diet should certain people be on? Are there things people are doing that make them really high-risk for cancer? There's a whole group of people who are 100-plus and have no disease. Why?" As of September 2013, 23andMe had 400,000 genotyped customers.

23andMe isn't just about you. Our research arm, 23andWe, gives customers the opportunity to leverage their data by contributing it to studies of genetics. With enough data, we believe 23andWe can produce revolutionary findings that will benefit us all. 26

How warfare changes

The reality is that soldiers are now a form of information technology, responsible for a far broader range of roles, decisions, and systems-based interactions than in any previous conflict. ... Today soldiers' skills are measured largely in relation to the technological systems the soldiers will be using. (Corey Mead, *War Play: Video Games and the Future of Armed Conflict*, 2013)

People change

- *Old theory of personal identity:*

You are a biological organism, with plans, skills, and a reputational trail

- *New theory of personal identity:*

your plans, skills, and reputational trail becoming intermeshed digitally with the plans, skills and reputational trails of other human beings

– making possible new kinds of plans, new kinds of achievements, new kinds of societies

The science of emerging media

The science of how people and societies are changing as a result of digital intermeshing

The science of how people are using digital intermeshing as a way of changing people and societies

People are changed in virtue of the fact that the world they live in is digitally intermeshed

People are changed by the fact that the computer can train them to improve their performance through tiny adjustments of the same act repeated 100s of times

Societies (for example an Army platoon) are created by the fact that the computer can train them to improve their performance through tiny adjustments of the same interaction repeated 100s of times

What are the fetures of emerging media

W. Russell Neuman (1991)

- a) alter the influence of distance,**
- b) increase the volume and speed of communications,**
- c) enable interactive communications**
- d) permit the merging of media forms.**

Now we need to add:

- e) create new kinds of digital entities – as for instance in the realm of financial derivatives**
- f) create new forms of human interaction**
- g) forces technology of overviews**
- h) brings everything into the open (and thereby enables plagiarism, rediscovery-of-the-wheel*, and fraud detection in ways that are already changing science)**

Best restaurants near me

The image shows a screenshot of the TripAdvisor website. At the top, the TripAdvisor logo is on the left, and the page title "Best Restaurants Near Me" is in the center. On the right, there is a notification bell icon and a user profile icon with the text "Hi, Barry". Below the header is a green navigation bar with links for "Flights", "Vacation Rentals", "Restaurants", "Best of 2016", "More", and "Write a Review" (with a "1+" badge). A search bar is located below the navigation bar, containing the text "Noord, Aruba, Caribbean" and a magnifying glass icon. To the right of the search bar is a "Search" button. Below the search bar is a large banner image of a restaurant interior with the text "Find your perfect restaurant" overlaid. At the bottom of the banner is another search bar with the placeholder text "City or restaurant name" and a green "Search" button.

Identity documents

- create identity (and thereby create the possibility of identity theft)
- what is the ontology of identity?
- what is the epistemology of identity (of the technologies of identification)?

serial personae for one real person

- last surviving soldier in battle takes on the persona of one of his comrades
- homosexual using heterosexual persona
- police persona (when wearing uniform)
- *ex officio* persona
- fake persona (adopted to escape consequences of a crime, or to fake one's own death)
- fake policeman (put on a policeman's uniform)
- fake priest
- fake identity adopted on the web e.g. by stalker
- a catfish is someone who pretends to be someone they're not using Facebook or other social media to create false identities, particularly to pursue deceptive online romances
- witness protection
- legend (cover, of field agent, of undercover police) x

single persona for multiple real people

- family (The Smiths) use a single email address to register for places where you fear spam
- business – web advertising
- Your country needs you!

single persona copying a single real person

- represented in a play, or in a puppet show, or in a *roman à clef*
- avatar in second life

Tenant Referencing For Landlords

A taxi-summoning app

Uber allows customers to rate drivers

- for punctuality, cleanliness, and so forth. You can then use these ratings in making bookings in the future.

But then, when they leave the taxi, the drivers rate the customers, and these ratings too are stored in the system

Behind the scenes, good behavior is
being rewarded and bad behavior
punished

customers who vomit in the cab, or who refuse
to pay, or who behave aggressively will find
themselves restricted in their use of Uber in
the future

e-people

A new theory of personal identity:

You are a biological organism (with plans, skills, qualifications, titles, etc.) *together with a reputational trail*

- increasingly, your reputational trail is a matter of your rankings on internet ranking sites
- including more or less secret rankings on sites such as Uber, match.com, and SCHUFA

For academics, today, the most important ranking site is google

The screenshot shows a Google Scholar profile for Barry Smith. The browser address bar displays the URL: scholar.google.com/citations?hl=en&user=icGNWj4AAAAJ&view_op=list_works&pagesize=100. The profile includes a photo of Barry Smith, his name, and his affiliation: Professor of Philosophy, Neurology and Computer Science, University at Buffalo. His research interests are listed as applied ontology, biomedical informatics, metaphysics, ontology, and philosophy. The profile is verified at buffalo.edu and is public. A search bar for authors is visible on the right side of the page.

Welcome to Publish or Perish

Publish or Perish is a software program that retrieves and analyzes academic citations. It uses [Google Scholar](#) to obtain the raw citations, then analyzes these and calculates a series of citation metrics. The results are available on-screen and can also be copied to the Windows clipboard (for pasting into other applications) or saved to a text file (for future reference or further analysis).

- [Getting started](#)
- [Documentation](#)
- [The Publish or Perish Book](#)

The Publish or Perish software and documentation are copyright © 1990 -2011 Tarma Software Research Pty Ltd. All rights reserved.

The Publish or Perish Book is more than just a guide to the software. It is a tremendously accessible introduction to bibliometrics and citation analysis, which many academics and graduate students find a pretty arcane and impenetrable topic.

The screenshot shows the NCBI PubMed search results page. At the top, the NCBI logo is on the left, and the PubMed logo with the URL 'www.pubmed.gov' is on the right. Below the logos, there are navigation tabs for 'All Databases', 'PubMed', 'Nucleotide', 'Protein', 'Genome', and 'Structure'. The search bar contains 'PubMed' in a dropdown and 'heart muscle development' in the input field. Below the search bar are buttons for 'Limits', 'Preview/Index', 'History', 'Clipboard', and 'Details'. The display settings show 'Summary' selected, 'Show 20' items, and 'Sort By' and 'Send to' dropdowns. The results summary shows 'All: 17536' and 'Review: 2524'. The first 20 items are listed, with the first four items shown in detail:

- 1:** [Tong CW, Stelzer JE, Greaser ML, Powers PA, Moss RL.](#)
Acceleration of Crossbridge Kinetics by Protein Kinase A Phosphorylation of Ca
Circ Res. 2008 Sep 18. [Epub ahead of print]
PMID: 18802026 [PubMed - as supplied by publisher]
- 2:** [Pentassuglia L, Sawyer DE.](#)
The role of Neuregulin-1beta/ErbB signaling in the heart.
Exp Cell Res. 2008 Sep 3. [Epub ahead of print]
PMID: 18801360 [PubMed - as supplied by publisher]
- 3:** [Takamatsu T.](#)
Arrhythmogenic substrates in myocardial infarct.
Pathol Int. 2008 Sep;58(9):533-43.
PMID: 18801068 [PubMed - in process]
- 4:** [Lu S, Borst DE, Horowitz R.](#)
Expression and alternative splicing of N-RAP during mouse skeletal muscle devel
Cell Motil Cytoskeleton. 2008 Sep 15. [Epub ahead of print]
PMID: 18792955 [PubMed - as supplied by publisher]

e-people (biology + *Bildungskapital* + intermeshing)

A new theory of personal identity:

You are a biological organism, with plans, skills, and a reputational trail that is intermeshed digitally with the plans, skills and reputational trails of other human beings

in such a way as to enable new sorts of human achievements in science, culture, commerce, law, war, ...

Hernando de Soto

Institute for Liberty and Democracy, Lima,
Peru

Bill Clinton:

“The most promising anti-poverty initiative in the world”

de Soto's hypothesis

the development of civilization in the course of history goes hand in hand with the accumulation of documentation (property titles, registration of persons, professional qualifications, keeping of accounts ...)

The need for a trace

Civilization rests on complex social entities – claims, obligations, rights, powers, roles, offices which survive for an extended period of time
What is the physical basis for this extended existence? Not the memories of those involved
–but *permanent, re-usable, discoverable* records These systems of records allowed new institutional artefacts such as mortgages and insurance to be created
and allowed human beings to acquire the habits and skills needed to participate successfully in the extended market order
